

Phase 1 – Brainstorming & Ideation

Project Title

LegalEase – AI-Powered Legal Document Generator

Problem Statement

Creating legal documents manually can be time-consuming and difficult for people who are unfamiliar with legal document formats. Users may not know what information is required or how to structure a document properly.

Proposed Solution

LegalEase is an AI-powered application that helps users generate structured legal documents by entering basic information and selecting the required document type.

Objectives

Provide an easy-to-use legal document generation system.

Reduce the time required to prepare basic documents.

Generate structured documents using AI.

Provide a simple interface for users.

Allow users to preview and download generated documents.

Provide a clear disclaimer that generated content should be reviewed by a qualified legal professional when appropriate.

Target Users

Students

Individuals

Small businesses

General users who need basic document drafts

Key Features

Document type selection

User input form

AI-powered document generation

Document preview

Copy/download option

Simple and user-friendly interface

Phase 2 – Requirement Analysis

Functional Requirements

1. User can open the LegalEase application.
2. User can select a document type.
3. User can enter the required information.
4. System validates the entered information.

5. AI processes the user's information.

6. System generates a structured document.

7. User can preview the document.

8. User can copy or download the document.

Non-Functional Requirements

Easy to use

Fast response

Reliable

Secure handling of user information

Responsive interface

Maintainable code

Hardware Requirements

Computer/laptop or smartphone

Internet connection

Minimum 4 GB RAM recommended

Software Requirements

Web browser

Python

Flask

HTML

CSS

JavaScript

AI/LLM API

GitHub

Expected Input

The user provides information such as:

Name

Address

Date

Parties involved

Document-specific details

Expected Output

The system produces a properly structured legal-document draft based on the information supplied by the user.

Phase 3 – Project Design Phase

System Architecture

USER

Web Application

Input Validation

Backend / Flask

AI / LLM API

Document Generation

Preview Generated

Download / Copy

Modules

1. User Interface Module

Provides the interface for selecting document types and entering information.

2. Input Validation Module

Checks whether required information has been entered correctly.

3. AI Processing Module

Sends the required information to the AI model and receives the generated document.

4. Document Generation Module

Formats the AI-generated response into a readable legal-document draft.

5. Output Module

Displays the generated document and provides options to copy or download it.

Technology Stack

Component	Technology
-----------	------------

Frontend	HTML, CSS, JavaScript
----------	-----------------------

Backend	Python Flask
---------	--------------

AI	LLM/API
----	---------

Version Control	GitHub
-----------------	--------

Browser	Chrome/Edge/Firefox
---------	---------------------

Phase 4 – Project Planning Phase

Development Plan

Step 1

Create the project repository.

Step 2

Design the user interface.

Step 3

Create document-selection options.

Step 4

Create input forms.

Step 5

Develop the backend.

Step 6

Integrate the AI model/API.

Step 7

Generate and display documents.

Step 8

Add copy/download functionality.

Step 9

Test all major features.

Step 10

Prepare documentation and demonstration video.

Project Timeline

Risk Management

Risk Solution

Incorrect user input Input validation

AI produces unsuitable output Review and validation

API failure Error handling

Slow response Optimize requests

API key exposure Store credentials securely

Unauthorized access Avoid storing unnecessary personal data

Phase 5 – Project Development Phase

Development Process

The LegalEase application is developed using a frontend, backend and AI processing layer.

Frontend

HTML, CSS and JavaScript are used to create:

Home page

Document selection

Input forms

Generate button

Result page

Backend

Python Flask handles:

User requests

Input processing

AI API communication

Generated response

Error handling

AI Integration

The AI model receives the user's selected document type and relevant information. It then generates a structured draft based on the provided information.

Example Workflow

Select Document

Enter Details

Click Generate

Phase 6 – Project Testing

Testing Objective

Testing is performed to ensure that LegalEase works correctly and produces the expected output.

Test Cases

Test	Expected Result
------	-----------------

Open application	Home page displayed
------------------	---------------------

Select document type	Selected type displayed
----------------------	-------------------------

Submit empty form	Validation message displayed
-------------------	------------------------------

Enter valid information	Request accepted
-------------------------	------------------

Generate document	AI-generated document displayed
-------------------	---------------------------------

Copy document	Text copied successfully
---------------	--------------------------

Download document	File downloaded successfully
-------------------	------------------------------

Invalid input	Appropriate error shown
---------------	-------------------------

API unavailable	Error message displayed
-----------------	-------------------------

Mobile browser Interface remains usable

Testing Result

The application is tested for functionality, input validation, AI response generation, output display and user interaction.

Conclusion

Testing helps identify errors and ensures that the major features of the LegalEase application work as expected.

Phase 7 – Project Documentation

Project Overview

LegalEase is an AI-powered legal document generator designed to simplify the preparation of basic legal-document drafts. Users provide relevant information through a simple interface, and the AI generates a structured draft.

Advantages

Easy to use

Saves time

Simple interface

AI-assisted document generation

Reduces repetitive drafting work

Can be accessed through a web browser

Limitations

AI-generated content may contain errors.

The application does not replace professional legal advice.

Output quality depends on the information provided by the user and the AI model.

Internet/API availability may be required.

Different jurisdictions may have different legal requirements.

Future Enhancements

More document types

Multiple-language support

PDF generation

User accounts

Document history

Improved document templates

Additional validation

Integration with secure document storage

Legal Disclaimer

LegalEase is an educational and informational tool. The generated documents are drafts and should be reviewed by a qualified legal professional before being used for an actual legal purpose. LegalEase does not provide legal advice or establish an attorney-client relationship.

Conclusion

LegalEase demonstrates how artificial intelligence can assist with structured document drafting. The project provides a simple interface through which users can enter information and receive an AI-generated document draft.

Phase 8 – Project Demonstration

Demonstration Flow

1. Introduction

Introduce the project:

> “Our project is LegalEase, an AI-powered legal document generator. It helps users create structured legal-document drafts by providing relevant information through a simple web interface.”

2. Show Home Page

Show the LegalEase homepage and explain the available options.

3. Select Document Type

Select one of the available document types.

4. Enter Information

Enter sample information into the required fields.

5. Generate Document

Click the Generate Document button.

6. Show AI Processing

Explain that the entered information is processed through the AI system.

7. Show Generated Document

Display the generated document and explain its main sections.

8. Show Download/Copy

Demonstrate the copy or download functionality if implemented.

9. Explain Disclaimer

Show the legal disclaimer and explain that the generated output should be reviewed before real-world legal use.

10. Conclusion

> “LegalEase provides an easy and efficient way to generate structured legal-document drafts using artificial intelligence. The project demonstrates the practical use of AI in document generation while emphasizing the importance of professional legal review.”
